

# Elijah Johnson

+18456543139 | elijah.shar.johnson@gmail.com | Boston, MA, USA | LinkedIn | GitHub

## Education

### Massachusetts Institute of Technology

June 2026

*Bachelor's, Artificial Intelligence & Decision-Making*

- Past Coursework: Data Structures and Algorithms, Controls, Probability, Assembly Programming, Machine Learning, Signal Processing
- Fall 2024 Coursework: Robotics, Computer Architecture, Advanced Algorithms, Data Science, Computer Visio

## Professional Experience

### Amazon

Seattle, WA, USA

*Software Development Engineer*

May 2024 - Present

- Developing a web application using AWS technologies (Lambda, S3, Elasticsearch) to enhance the efficiency of log queries for external Amazon services and applications based on specific key identifiers.
- Leading a cost-reduction initiative by researching and implementing AWS querying optimizations. Implementing log aggregation into labeled S3 buckets and utilizing Elasticsearch, which is projected to reduce operational costs by over 40%.
- Gathering data and using supervised machine learning classification to identify common characteristics of mislabeled, undelivered packages.

### Amazon

Seattle, WA, USA

*Full Stack Developer*

June 2023 - September 2023

- Created a QR reading module on static website for employees in Amazon fulfillment centers to easily access training modules in over 20 countries
- Used AWS Lambda to authenticate employee tokens before launching training to ensure security of content from any location.

## Projects & Outside Experience

### Dual Path RNN Time-Domain Single-Channel Guitar String Separation

Cambridge, MA, USA

*January 2024 - April 2024*

- Leveraged a voice separation model trained on the WSJ0 dataset (141 hours of speech recordings) using Dual Path RNN and TasNET to encode and separate audio. Successfully applied transfer learning by training the model on MIDI guitar data.
- Improved model performance by further training on diverse guitar songs and developing a classifier to identify notes from specific strings.
- Employed signal processing techniques (DFT Filtering) to manually silence background noise, isolate the string of interest, and deamplify unwanted sounds.

### Event Manager Website

Remote

*July 2023 - August 2023*

- Efficiently managed guest check-in process for Phi Kappa Sigma events, successfully checking in over 300 attendees using a system of custom QR invitations. Each guest's unique identifier was temporarily stored in a DynamoDB table, ensuring accurate and quick access to attendee information.
- Efficiently managed guest check-in process for Phi Kappa Sigma events, successfully checking in over 300 attendees using a system of custom QR invitations. Each guest's unique identifier was temporarily stored in a DynamoDB table, ensuring accurate and quick access to attendee information.

## Research

### MIT Personal Robots Group - [LINK](#)

*Teacher and Researcher for Data Activism*

- Utilized Pandas and Seaborn modules to extract data on Environmental Justice, Food Insecurity, and Housing in Boston
- Developed custom functions class using Pandas and Seaborn to make data extraction beginner friendly for high school students
- Collaborated in writing research paper on computing with the purpose of empowerment which was published and Sponsored by Black Issues in Computing Education (BICE)

## Skills

**Languages:** Python, JavaScript, Java, Julia, MATLAB, HTML/CSS, TypeScript, java, C, Go, Wolfram Language

**Developer Tools:** AWS, Mathematica, Git, IntelliJ

**Technologies/Frameworks:** Node.js, React.js, Tensorflow, Pytorch, Django, Pandas, Seaborn, NumPy
